

What is claimed is:

fab
1. A sales promotion controlling system based
on direct mail issued using online communicating
means corresponding to an Internet technology,
comprising:

5 a browsing determining device for determining
whether or not issued direct mail was browsed; and
10 a sales promotion controlling device for
controlling sales promotion activities for
commodities advertised by the direct mail
corresponding to the determined result of said
browsing determining device.

15 2. The system as set forth in claim 1,
wherein said sales promotion controlling
device is a sever device for use with a point-of-
sales (POS) information managing system or an
online shopping system and controls an assignment
20 state of a benefit to a commodity purchasing
activity by a recipient of the direct mail on the
POS information managing system or the online
shopping system based on the determined result of
said browsing determining device .

25

3. The system as set forth in claim 1,
wherein said sales promotion controlling
device is a sever device for use with a point-of-
sales (POS) information managing system or an
5 online shopping system and analyzes an effect of
the issuance of the direct mail based on the
determined result of said browsing determining
device and a transaction history of commodities on
the POS information managing system or the online
10 shopping system.

4. The system as set forth in claim 1,
wherein said sales promotion controlling
device controls the issuance state of the direct
15 mail based on the determined result of said
browsing determining device.

5. The system as set forth in claim 1,
wherein the direct mail is issued as
20 electronic mail with a direct mail open acknowledge
message request option, and

wherein said browsing determining device
determines whether or not the issued direct mail
was browsed basd on the direct mail open
25 acknowledge message returned from a recipient of

00824-08654260

the electronic mail.

6. The system as set forth in claim 1,
wherein the direct mail is issued using a
5 sales promotion homepage, and
wherein said browsing determining device
determines whether or not the issued direct mail
was browsed based on a returned result of a form
provided on the sales promotion homepage returned
10 by a customer who browsed the sales promotion
homepage.

7. A server for controlling direct mail issued
using online communicating means based on an
15 Internet technology, comprising:
a first storing unit storing a customer to
whom direct mail describing sales promotion
information was transmitted;
a second storing unit storing information
representing whether or not the customer to whom
20 direct mail was transmitted browsed the direct
mail; and
a third storing unit storing information about
commodities,
25 wherein said third storing unit stores sales

00000000000000000000000000000000

promotion information of direct mail in correspondence with commodities.

8. A server for controlling direct mail issued
5 using online communicating means based on an Internet technology, comprising:

a first storing unit storing information about a customer to whom direct mail describing sales promotion information was transmitted; and

10 a second storing unit storing information about each customer,

wherein said second storing unit stores information representing whether or not each customer browsed the direct mail in correspondence 15 with each customer.

9. A processing apparatus for processing a service corresponding to direct mail issued using online communicating means based on an Internet 20 technology, comprising:

a first storing unit storing information about a customer to whom direct mail describing sales promotion information was transmitted;

25 a second storing unit storing information representing whether or not the customer to whom

008224-0064260

direct mail was transmitted browsed the direct
mail;

an identifying unit identifying the customer
who uses the service;

5 a determining unit determining whether or not
the direct mail was transmitted to the customer
with reference to said first storing unit and
determining whether or not the customer browsed the
direct mail with reference to said second storing
10 unit when the customer is identified by said
identifying unit; and

15 a processing unit providing different services
depending on whether the direct mail was not
transmitted to the ~~customer~~, the customer did not
browse the direct mail, or the customer browsed the
direct mail corresponding to the determined result
of said determining unit.

20 10. A processing apparatus for processing a
service corresponding to direct mail issued using
online communicating means based on an Internet
technology, comprising:

a first storing unit storing information about
direct mail transmitted to a customer;

25 a second storing unit storing information

00822T-08E64Z60

representing sales promotion in correspondence with commodity information; and

a settling unit settling a transaction performed with the customer,

5 wherein said settling unit references said first storing unit, determines the transmission state of the direct mail to the customer, references said second storing unit, determines whether or not the customer purchased commodities
10 with respect to the sales promotion, and provides a service to the customer based on the determined result.

11. A sales promotion controlling method based
15 on direct mail issued using online communicating means based on an Internet technology, comprising:

 determining whether or not issued direct mail was browsed; and

20 controlling sales promotion activities for commodities advertised by the direct mail based on the determined result.

12. A sales promotion controlling method based
25 on direct mail issued using online communicating means based on an Internet technology, comprising:

00000000000000000000000000000000

determining whether or not issued direct mail was browsed; and

controlling an assignment state of a benefit to a commodity purchasing activity by a recipient
5 of the direct mail on a POS information managing system or an online shopping system corresponding to the determined result.

13. A sales promotion controlling method based
10 on direct mail issued using online communicating means based on an Internet technology, comprising:

determining whether or not issued direct mail was browsed; and

15 analyzing an effect of the issuance of the direct mail based on the determined result and a transaction history of commodities on a POS information managing system or an online shopping system.

20 14. A sales promotion controlling method based on direct mail issued using online communicating means based on an Internet technology, comprising:

determining whether or not issued direct mail was browsed; and

25 controlling an issuance state of the direct

mail based on the determined result.

15. The method as set forth in claim 11,
further comprising:

5 issuing the direct mail an electronic mail
with a direct mail open acknowledge message request
option; and

10 determining whether or not the issued direct
mail was browsed based on the direct mail open
acknowledge message returned from the recipient of
the electronic mail.

15. The method as set forth in claim 11,
further comprising:

15 issuing the direct mail using a sales
promotion homepage; and

determining whether or not the issued direct
mail was browsed based on a returned result of a
form provided on the sales promotion homepage
20 returned by a customer who browsed the sales
promotion homepage.

25 17. A record medium from which a computer
reads a program, the program causing the computer
to perform:

determining whether or not direct mail issued using online communicating means based on an Internet technology was browsed; and

5 controlling sales promotion activities for commodities advertised by the direct mail based on the determined result.

10 18. A record medium from which a computer reads a program, the program causing the computer to perform:

determining whether or not direct mail issued using online communicating means based on an Internet technology was browsed; and

15 controlling an assignment state of a benefit to a commodity purchasing activity by a recipient of the direct mail on a POS information managing system or an online shopping system based on the determined result.

20 19. A record medium from which a computer reads a program, the program causing the computer to perform:

25 determining whether or not direct mail issued using online communicating means based on an Internet technology was browsed; and

analyzing an effect of the issuance of the direct mail based on the determined result and a transaction history of commodities on a POS information managing system or an online shopping system.

20. A record medium from which a computer reads a program, the program causing the computer to perform:

10 determining whether or not direct mail issued using online communicating means based on an Internet technology was browsed; and
 controlling an issuance state of the direct mail based on the determined result.
